

INTEGRATED COOLING

COMPRESSOR UNITS FOR AEROMASTER XP AND AEROMASTER CIRRUS

■ Double-compressor design

■ Single-compressor design

INTEGRATED COOLING

Compressor units along with optimized Remak exchangers serve as sources of cold for AeroMaster Cirrus and AeroMaster XP air-handling units.

CONFIGURATION

We can deliver either a fully operational unit with all the components (compressors, exchangers, etc.) of the compressor circuit interconnected and the piping filled with coolant so all you need to do is to switch the unit on, or a disassembled unit.

The unit assembly includes the necessary safety and control elements, separate distribution board and suitably dimensioned optional injection valves. Depending on the output, respectively on the requirement of the control level, the unit can be fitted with one or two compressors.

When designing the system, we only use quality components from approved suppliers.

CONTROL

- The unit's output can be controlled on several levels depending on its application.
- The unit's output is controlled by switching the compressor using an external signal, i.e. ON/OFF system. If a double-compressor arrangement is used, 0/50/100 % output control can be achieved by switching the compressors in sequence.
- If an electronic controller is used, the switching of the compressors is then controlled depending on the number of operating hours elapsed.
- If the Digital Scroll™ compressor is used, the refrigerating capacity will then be controlled within a given range steplessly.
- To avoid the whole system's efficiency being reduced, REMAK compressor units are antifreeze protected.

INTEGRATED COOLING ADVANTAGES

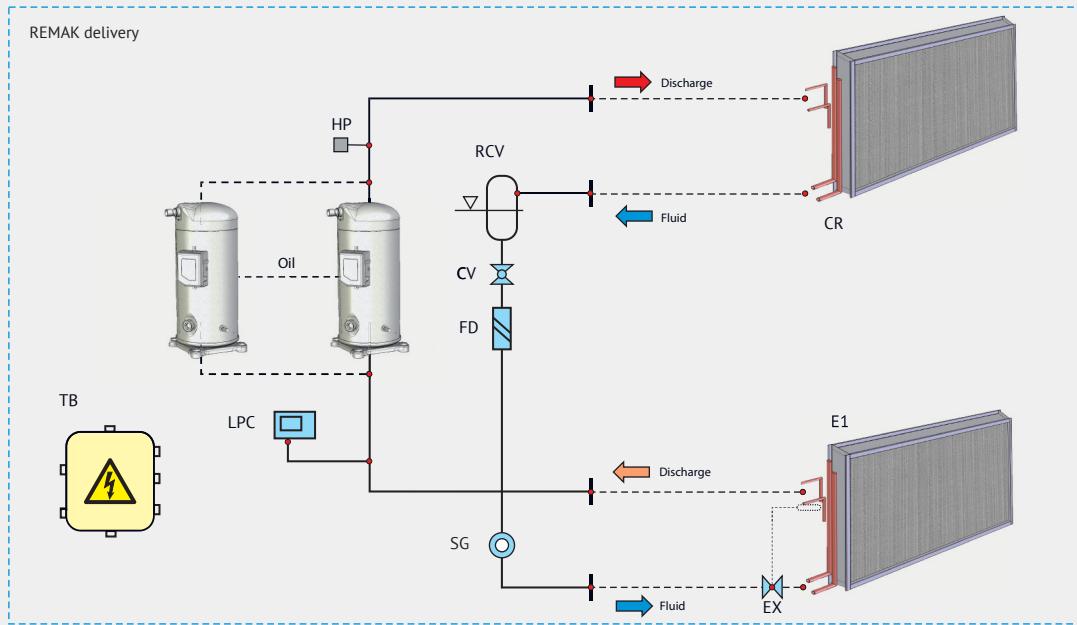

- Simplifies and makes air-handling unit commissioning cheaper
- Saves room (no need for installation of outdoor sources of cold)
- Saves operating costs, among others by creating suitable conditions for heat removal (high EER factor – energy efficiency factor)
- Simple, fast and cheap servicing (just one device)
- Minimum length of distribution pipes – minimum volume of coolant
- Low sound level transmitted to the surroundings
- Minimised damage in the event of failure (just one of the sources of cold is disabled)

INTEGRATED COOLING

REMAK SOLUTION ADVANTAGES

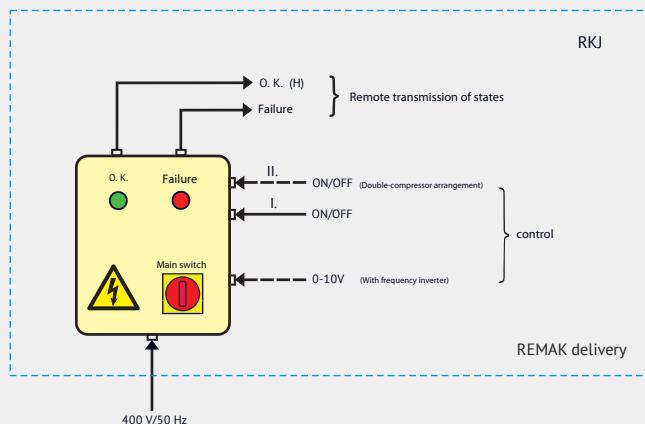

- customised solution without catalogue compromises
- option of economy or comfort solution
- simple and therefore failure-free design
- High efficiency due to:
 - minimised effective area of the exchangers
 - selection of suitable components in the circuit (injection valves, etc.)
 - system designed for optimum operating temperatures
- optional delivery of a „plug and play“ unit or a disassembled unit

CIRCUIT CONNECTION DIAGRAM

Legend:

- C1, 2 – Compressor(s)
- CR – Condenser
- RCV – Coolant header
- FD – Filter-dehydrator
- CV – shut-off service valve
- SG – Sight glass
- EX – Expansion valve
- E1 – Evaporator
- LPC – Low-pressure pressostat
- HP – High-pressure pressostat
- TB – Unit terminal box
- RKJ – Unit power and control distribution board
