1 Quick Guide

1.1 Safety

1.1.1 Warnings

WARNING

HIGH VOLTAGE!

Frequency converters contain high voltage when connected to AC mains input power. Installation, start up, and maintenance should be performed by qualified personnel only. Failure to perform installation, start up, and maintenance by qualified personnel could result in death or serious injury.

High Voltage

Frequency converts are connected to hazardous mains voltages. Extreme care should be taken to protect against shock. Only trained personnel familiar with electronic equipment should install, start, or maintain this equipment.

Touching the electrical parts may be fatal - even after the equipment has been disconnected from mains. Also make sure that other voltage inputs have been disconnected (linkage of DC intermediate circuit). Be aware that there may be high voltage on the DC link even when the LEDs are turned off. Before touching any potentially live parts of the frequency converter, wait at least 4 min for all M1, M2 and M3 sizes. Wait at least 15 min for all M4 and M5 sizes.

WARNING

UNINTENDED START!

When the frequency converter is connected to AC mains, the motor may start at any time. The frequency converter, motor, and any driven equipment must be in operational readiness. Failure to be in operational readiness when the frequency converter is connected to AC mains could result in death, serious injury, equipment, or property damage.

Unintended Start

When the frequency converter is connected to the AC mains, the motor may be started by means of an external switch, a serial bus command, an input reference signal, or a cleared fault condition. Use appropriate cautions to guard against an unintended start.

Leakage Current (>3.5 mA)

Follow national and local codes regarding protective earthing of equipment with a leakage current $> 3,5 \text{ mA}$. Frequency converter technology implies high frequency switching at high power. This will generate a leakage current in the earth connection. A fault current in the frequency converter at the output power terminals might contain a DC component which can charge the filter capacitors and cause a transient earth current. The earth

leakage current depends on various system configurations including RFI filtering, screened motor cables, and frequency converter power.

EN/IEC61800-5-1 (Power Drive System Product Standard) requires special care if the leakage current exceeds 3,5 mA. Earth grounding must be reinforced in one of the following ways:

- Earth ground wire of at least 10 mm².
- Two separate earth ground wires both complying with the dimensioning rules.

See EN 60364-5-54 § 543.7 for further information.

Using RCDs

Where residual current devices (RCDs), also known as earth leakage circuit breakers (ELCBs), are used, comply with the following:

- Use RCDs of type B only which are capable of detecting AC and DC currents.
- Use RCDs with an inrush delay to prevent faults due to transient earth currents.
- Dimension RCDs according to the system configuration and environmental considerations.

Motor Thermal Protection

Motor overload protection is possible by setting Parameter 1-90 Motor thermal protection to the value ETR trip. For the North American market: Implemented ETR function provide class 20 motor overload protection, in accordance with NEC.

Installation at High Altitudes

For altitudes above 2 km, contact Danfoss regarding PELV.

1.1.2 Safety Instructions

- Make sure the frequency converter is properly connected to earth.
- Do not remove mains connections, motor connections or other power connections while the frequency converter is connected to power.
- Protect users against supply voltage.
- Protect the motor against overloading according to national and local regulations.
- The earth leakage current exceeds 3,5 mA.
- The [Off/Reset] key is not a safety switch. It does not disconnect the frequency converter from mains.

1.2 Introduction

1.2.1 Available Literature

NOTE

This design guide contains the basic information necessary for installing and running the frequency converter.

If more information is needed, the literature below can be downloaded from:

<http://www.danfoss.com/BusinessAreas/DrivesSolutions/Documentations>

Table 1.1

1.2.2 Approvals

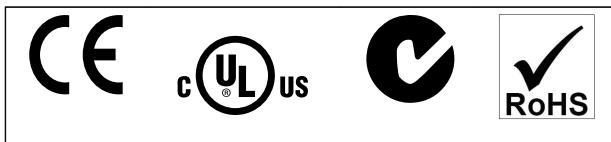

Table 1.2

1.2.3 IT Mains

NOTE

IT Mains

Installation on isolated mains source, i.e. IT mains.

Max. supply voltage allowed when connected to mains:
440 V.

As an option, Danfoss offers recommended line filters for improved harmonics performance.

1.2.4 Avoid Unintended Start

While the frequency converter is connected to mains, the motor can be started/stopped using digital commands, bus commands, references or via the LCP.

- Disconnect the frequency converter from mains whenever personal safety considerations make it necessary to avoid unintended start of any motors.
- To avoid unintended start, always press [Off/Reset] before changing parameters.

1.2.5 Disposal Instruction

Equipment containing electrical components must not be disposed of together with domestic waste.
It must be separately collected with electrical and electronic waste according to local and currently valid legislation.

Table 1.3

1.3 Installation

1. Disconnect FC 51 from mains (and external DC supply, if present.)
2. Wait for 4 min (M1, M2 and M3) and 15 min (M4 and M5) for discharge of the DC-link.
3. Disconnect DC bus terminals and brake terminals (if present).
4. Remove motor cable.

1.3.1 Side-by-Side Installation

The frequency converter can be mounted side-by-side for IP20 rating units and requires 100 mm clearance above and below for cooling. Refer to the specifications near the end of this document for details on environmental ratings of the frequency converter.

1.3.2 Mechanical Dimensions

A template for drilling can be found on the flap of the packaging.

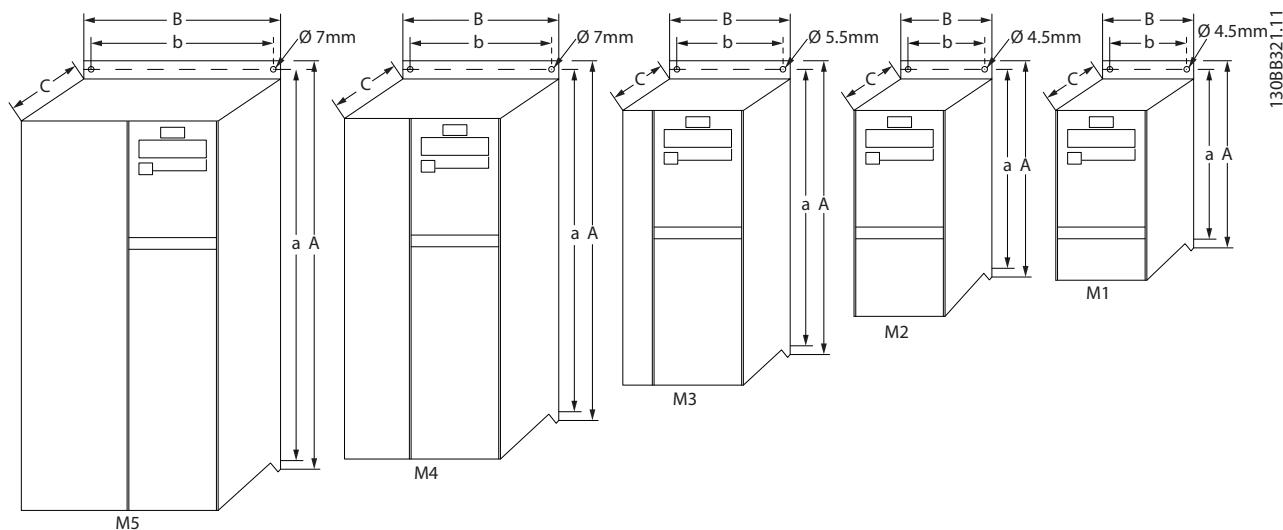

Illustration 1.1 Mechanical Dimensions

| Frame | Power [kW] | | | Height [mm] | | | Width [mm] | | Depth ¹⁾ [mm] | | Max. Weight |
|-------|-------------|-------------|-------------|-------------|----------------------------|-------|------------|-----|--------------------------|-----|-------------|
| | 1X200-240 V | 3X200-240 V | 3X380-480 V | A | A (incl. decoupling plate) | a | B | b | C | | |
| M1 | 0.18-0.75 | 0.25-0.75 | 0.37-0.75 | 150 | 205 | 140.4 | 70 | 55 | 148 | 1.1 | |
| M2 | 1.5 | 1.5 | 1.5-2.2 | 176 | 230 | 166.4 | 75 | 59 | 168 | 1.6 | |
| M3 | 2.2 | 2.2-3.7 | 3.0-7.5 | 239 | 294 | 226 | 90 | 69 | 194 | 3.0 | |
| M4 | | | 11.0-15.0 | 292 | 347.5 | 272.4 | 125 | 97 | 241 | 6.0 | |
| M5 | | | 18.5-22.0 | 335 | 387.5 | 315 | 165 | 140 | 248 | 9.5 | |

¹⁾ For with potentiometer, add 7.6 mm.

Table 1.4 Mechanical Dimensions

1.3.3 Electrical Installation in General

NOTE

All cabling must comply with national and local regulations on cable cross-sections and ambient temperature. Copper conductors required, (60-75 °C) recommended.

| Frame | Power [kW] | | | Torque [Nm] | | | | | | |
|-------|-------------|-------------|-------------|-------------|-------|---------------------|-------------------|-------|-------|--|
| | 1x200-240 V | 3x200-240 V | 3x380-480 V | Line | Motor | DC connection/Brake | Control Terminals | Earth | Relay | |
| M1 | 0.18-0.75 | 0.25-0.75 | 0.37-0.75 | 1.4 | 0.7 | Spade ¹⁾ | 0.15 | 3 | 0.5 | |
| M2 | 1.5 | 1.5 | 1.5-2.2 | 1.4 | 0.7 | Spade ¹⁾ | 0.15 | 3 | 0.5 | |
| M3 | 2.2 | 2.2-3.7 | 3.0-7.5 | 1.4 | 0.7 | Spade ¹⁾ | 0.15 | 3 | 0.5 | |
| M4 | | | 11.0-15.0 | 1.3 | 1.3 | 1.3 | 0.15 | 3 | 0.5 | |

¹⁾ Spade connectors (6.3 mm Faston plugs)

Table 1.5 Tightening of Terminals

1.3.4 Fuses

Branch circuit protection

To protect the installation against electrical and fire hazard, all branch circuits in an installation, switch gear, machines etc., must be short-circuited and overcurrent protected according to national/international regulations.

Short circuit protection

Danfoss recommends using the fuses mentioned in the following tables to protect service personnel or other equipment in case of an internal failure in the unit or short-circuit on DC-link. The frequency converter provides full short circuit protection in case of a short-circuit on the motor or brake output.

Overcurrent protection

Provide overload protection to avoid overheating of the cables in the installation. Overcurrent protection must always be carried out according to national regulations. Fuses must be designed for protection in a circuit capable of supplying a maximum of 100,000 A_{rms} (symmetrical), 480 V maximum.

Non UL compliance

If UL/CUL is not to be complied with, Danfoss recommends using the fuses mentioned in *Table 1.6*, which ensures compliance with EN50178/IEC61800-5-1:

In case of malfunction, not following the fuse recommendation may result in damage to the frequency converter and the installation.

| FC 51 | Max. Fuses UL | | | | | | Max. fuses non UL |
|--------------------|---------------|----------|----------|-------------|--------------------|--------------------|----------------------|
| | Bussmann | Bussmann | Bussmann | Littel fuse | Ferraz- Shawmut | Ferraz- Shawmut | |

Table 1.6 Fuses

1.3.5 Connecting to Mains and Motor

The frequency converter is designed to operate all standard three-phased asynchronous motors.

The frequency converter is designed to accept mains/motor cables with a maximum cross-section of 4 mm²/10 AWG (M1, M2 and M3) and maximum cross-section 16 mm²/6 AWG (M4 and M5).

- Use a shielded/armoured motor cable to comply with EMC emission specifications, and connect this cable to both the decoupling plate and the motor metal.
 - Keep motor cable as short as possible to reduce the noise level and leakage currents.
 - For further details on mounting of the decoupling plate, see *Instruction MI02B*.
 - Also see EMC-Correct Installation in *Design Guide MG02K*.
1. Mount the earth wires to earth terminal.
 2. Connect motor to terminals U, V and W.
 3. Mount mains supply to terminals L1/L, L2 and L3/N (3-phase) or L1/L and L3/N (single-phase) and tighten.

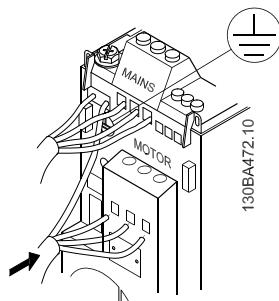

Illustration 1.2 Mounting of Earth Cable, Mains and Motor Wires

1.3.6 Control Terminals

All control cable terminals are located underneath the terminal cover in front of the frequency converter. Remove the terminal cover using a screwdriver.

NOTE

See back of terminal cover for outlines of control terminals and switches.

NOTE

Do not operate switches with power on the frequency converter.

6-19 Terminal 53 Mode must be set according to Switch 4 position.

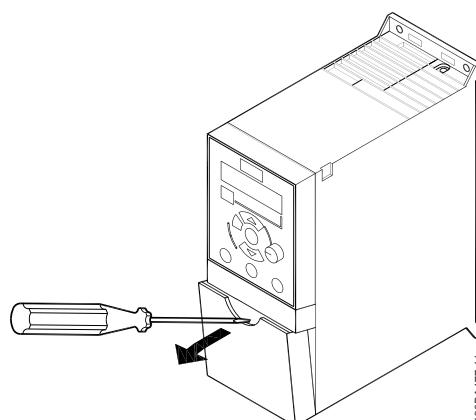

Illustration 1.3 Removing Terminal Cover

Table 1.7 Settings for S200 Switches 1-4

Illustration 1.4 S200 Switches 1-4

Illustration 1.5 shows all control terminals of the frequency converter. Applying Start (term. 18) and an analog reference (term. 53 or 60) make the frequency converter run.

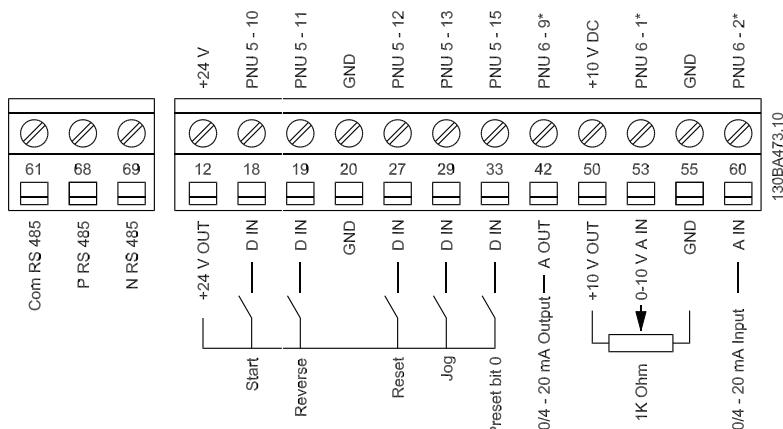

Illustration 1.5 Overview of Control Terminals in PNP-configuration and Factory Setting

1.3.7 Power Circuit - Overview

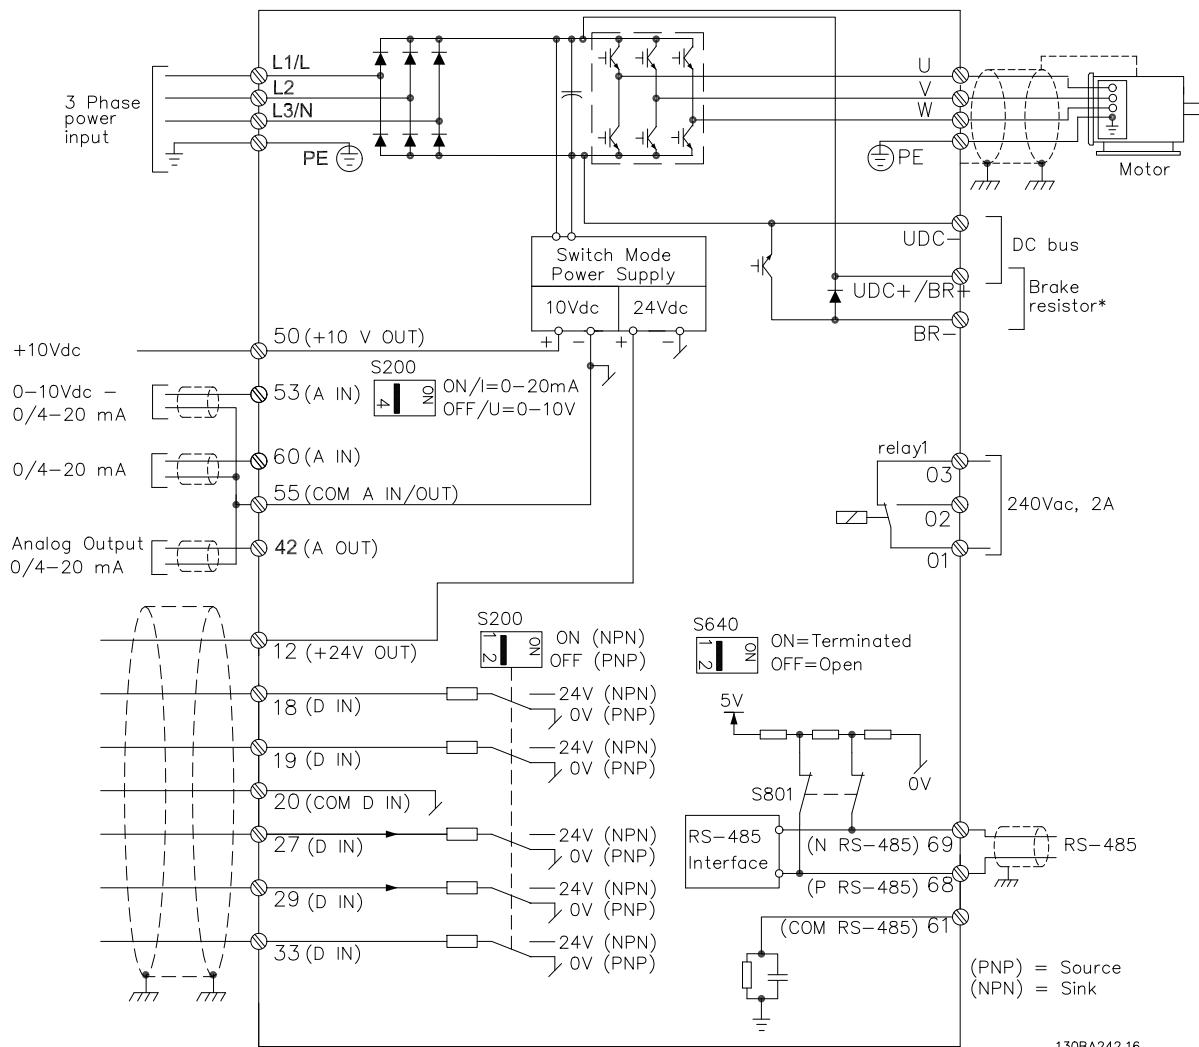

Illustration 1.6 Diagram Showing all Electrical Terminals

* Brake (BR+ and BR-) are not applicable for frame M1.

Brake resistors are available from Danfoss.

Improved power factor and EMC performance can be achieved by installing optional Danfoss line filters.

Danfoss power filters can also be used for load sharing.

NOTE

Voltage levels of up to 850 V DC may occur between terminals

+UDC/+BR and -UDC. Not short circuit protected.

1.3.8 Load Sharing/Brake

Use 6.3 mm insulated Faston Plugs designed for high voltage for DC (Load Sharing and brake).

Contact Danfoss or see *instruction MI50N* for load sharing and *instruction MI90F* for brake.

Load sharing: Connect terminals -UDC and +UDC/+BR.

Brake: Connect terminals -BR and +UDC/+BR (Not applicable for frame M1).

1.4 Programming

1.4.1 Programming with LCP

For detailed information on programming, see *Programming Guide*, MG02C.

NOTE

The frequency converter can also be programmed from a PC via RS-485 com-port by installing the MCT 10 Set-up Software.

This software can either be ordered using code number 130B1000 or downloaded from the Danfoss Web site: www.danfoss.com/BusinessAreas/DrivesSolutions/software-download

Pressing [OK] for more than 1 s enters 'Adjust' mode. In 'Adjust' mode, it is possible to make fast adjustment by pressing [\blacktriangle] [\blacktriangledown] combined with [OK].

Press [\blacktriangle] [\blacktriangledown] to change value. Press [OK] to shift between digits quickly.

To exit 'Adjust' mode, press [OK] more than 1 s again with changes saving or press [Back] without changes saving.

Operation Keys

A yellow light above the operation keys indicates the active key.

[Hand on]: Starts the motor and enables control of the frequency converter via the .

[Off/Reset]: The motor stops except in alarm mode. In that case the motor will be reset.

[Auto on]: The frequency converter is controlled either via control terminals or serial communication.

[Potentiometer] (LCP12): The potentiometer works in two ways depending on the mode in which the frequency converter is running.

In *Auto Mode* the potentiometer acts as an extra programmable analog input.

In *Hand on Mode* the potentiometer controls local reference.

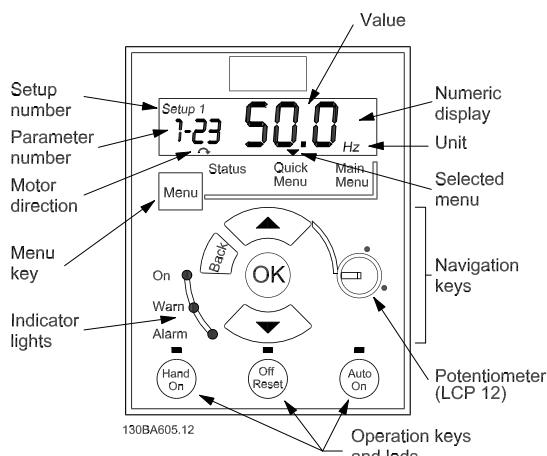

Illustration 1.7 Description of Buttons and Display

Use the [Menu] key to select one of the following menus:

Status

For readouts only.

Quick Menu

For access to Quick Menus 1 and 2, respectively.

Main Menu

For access to all parameters.

Navigation Keys

[Back]: For moving to the previous step or layer in the navigation structure.

[\blacktriangle] [\blacktriangledown]: For manoeuvring between parameter groups, parameters and within parameters.

[OK]: For selecting a parameter and for accepting changes to parameter settings.

1.5 Parameter Overview

Table 1.11

1.6 Troubleshooting

| No. | Description | Warning | Alarm | Trip Lock | Error | Cause of Problem |
|--------|--|---------|-------|-----------|-------|---|
| 2 | Live zero error | X | X | | | Signal on terminal 53 or 60 is less than 50% of value set in 6-10 Terminal 53 Low Voltage, 6-12 Terminal 53 Low Current and 6-22 Terminal 54 Low Current. |
| 4 | Mains phase loss ¹⁾ | X | X | X | | Missing phase on supply side, or too high voltage imbalance. Check supply voltage. |
| 7 | DC over voltage ¹⁾ | X | X | | | Intermediate circuit voltage exceeds limit. |
| 8 | DC under voltage ¹⁾ | X | X | | | Intermediate circuit voltage drops below "voltage warning low" limit. |
| 9 | Inverter overloaded | X | X | | | More than 100% load for too long. |
| 10 | Motor ETR over temperature | X | X | | | Motor is too hot due to more than 100% load for too long. |
| 11 | Motor thermistor over temperature | X | X | | | Thermistor or thermistor connection is disconnected. |
| 12 | Torque limit | X | | | | Torque exceeds value set in either par. 4-16 or 4-17. |
| 13 | Over Current | X | X | X | | Inverter peak current limit is exceeded. |
| 14 | Earth fault | X | X | X | | Discharge from output phases to ground. |
| 16 | Short Circuit | | X | X | | Short-circuit in motor or on motor terminals. |
| 17 | Control word timeout | X | X | | | No communication to frequency converter. |
| 25 | Brake resistor short-circuited | | X | X | | Brake resistor is short-circuited, thus brake function is disconnected. |
| 27 | Brake chopper short-circuited | | | X | X | Brake transistor is short-circuited, thus brake function is disconnected. |
| 28 | Brake check | | | X | | Brake resistor is not connected/working |
| 29 | Power board over temp | X | X | X | | Heat-sink cut-out temperature has been reached. |
| 30 | Motor phase U missing | | X | X | | Motor phase U is missing. Check the phase. |
| 31 | Motor phase V missing | | X | X | | Motor phase V is missing. Check the phase. |
| 32 | Motor phase W missing | | X | X | | Motor phase W is missing. Check the phase. |
| 38 | Internal fault | | X | X | | Contact local Danfoss supplier. |
| 44 | Earth fault | | X | X | | Discharge from output phases to ground. |
| 47 | Control Voltage Fault | | X | X | | 24 V DC may be overloaded. |
| 51 | AMT check U_{nom} and I_{nom} | | X | | | Wrong setting for motor voltage and/or motor current. |
| 52 | AMT low I_{nom} | | | X | | Motor current is too low. Check settings. |
| 59 | Current limit | X | | | | VLT overload. |
| 63 | Mechanical Brake Low | | X | | | Actual motor current has not exceeded "release brake" current within "start delay" time window. |
| 80 | Drive Initialised to Default Value | | X | | | All parameter settings are initialized to default settings. |
| 84 | The connection between drive and is lost | | | | X | No communication between and frequency converter |
| 85 | Button disabled | | | | X | See parameter group 0-4* LCP |
| 86 | Copy fail | | | | X | An error occurred while copying from frequency converter to LCP or vice versa. |
| 87 | data invalid | | | | X | Occurs when copying from LCP if the LCP contains erroneous data - or if no data was uploaded to the LCP. |
| 88 | data not compatible | | | | X | Occurs when copying from LCP if data are moved between frequency converters with major differences in software versions. |
| 89 | Parameter read only | | | | X | Occurs when trying to write to a read-only parameter. |
| 90 | Parameter database busy | | | | X | LCP and RS485 connection are trying to update parameters simultaneously. |
| 91 | Parameter value is not valid in this mode | | | | X | Occurs when trying to write an illegal value to a parameter. |
| 92 | Parameter value exceeds the min/max limits | | | | X | Occurs when trying to set a value outside the range. |
| nw run | Not While RUNning | | | | X | Parameter can only be changed when the motor is stopped. |
| Err. | A wrong password was entered | | | | X | Occurs when using a wrong password for changing a password-protected parameter. |

¹⁾ These faults may be caused by mains distortions. Installing Danfoss Line Filter may rectify this problem.

Table 1.16 Mains Supply 3x380-480 V AC

- At rated load conditions.

1.8 General Technical Data

Protection and features

- Electronic thermal motor protection motor protection against overload.
- Temperature monitoring of the heatsink ensures that the frequency converter trips in case of overtemperature.
- The frequency converter is protected against short-circuits between motor terminals U, V, W.
- If a motor phase is missing, the frequency converter trips and issues an alarm.
- If a mains phase is missing, the frequency converter trips or issues a warning (depending on the load).
- Monitoring of the intermediate circuit voltage ensures that the frequency converter trips if the intermediate circuit voltage is too low or too high.
- The frequency converter is protected against earth faults on motor terminals U, V, W.

Mains supply (L1/L, L2, L3/N)

| | |
|--|---|
| Supply voltage | 200-240 V ±10% |
| Supply voltage | 380-480 V ±10% |
| Supply frequency | 50/60 Hz |
| Max. imbalance temporary between mains phases | 3.0% of rated supply voltage |
| True Power Factor | ≥0.4 nominal at rated load |
| Displacement Power Factor (cosφ) near unity | (>0.98) |
| Switching on input supply L1/L, L2, L3/N (power-ups) | maximum 2 times/min. |
| Environment according to EN60664-1 | overvoltage category III/pollution degree 2 |

The unit is suitable for use on a circuit capable of delivering not more than 100.000 RMS symmetrical Amperes, 240/480 V maximum.

Motor output (U, V, W)

| | |
|---------------------|---|
| Output voltage | 0-100% of supply voltage |
| Output frequency | 0-200 Hz (VVC ^{plus}), 0-400 Hz (u/f) |
| Switching on output | Unlimited |
| Ramp times | 0.05-3600 s |

Cable lengths and cross sections

| | |
|---|---|
| Max. motor cable length, screened/armoured (EMC correct installation) | 15 m |
| Max. motor cable length, unscreened/unarmoured | 50 m |
| Max. cross section to motor, mains* | |
| Connection to load sharing/brake (M1, M2, M3) | 6.3 mm insulated Faston Plugs |
| Max. cross section to load sharing/brake (M4, M5) | 16 mm ² /6 AWG |
| Maximum cross section to control terminals, rigid wire | 1.5 mm ² /16 AWG (2x0.75 mm ²) |
| Maximum cross section to control terminals, flexible cable | 1 mm ² /18 AWG |
| Maximum cross section to control terminals, cable with enclosed core | 0.5 mm ² /20 AWG |
| Minimum cross section to control terminals | 0.25 mm ² |

* See 1.7 Specifications for more information!

Digital inputs (pulse/encoder inputs)

| | |
|---|---------------------|
| Programmable digital inputs (pulse/encoder) | 5 (1) |
| Terminal number | 18, 19, 27, 29, 33, |
| Logic | PNP or NPN |
| Voltage level | 0-24 V DC |
| Voltage level, logic '0' PNP | <5 V DC |
| Voltage level, logic '1' PNP | >10 V DC |
| Voltage level, logic '0' NPN | >19 V DC |
| Voltage level, logic '1' NPN | <14 V DC |
| Maximum voltage on input | 28 V DC |
| Input resistance, R _i | approx. 4 k |
| Max. pulse frequency at terminal 33 | 5000 Hz |
| Min. pulse frequency at terminal 33 | 20 Hz |

Analog Inputs

| | |
|-----------------------------------|--------------------------|
| Number of analog inputs | 2 |
| Terminal number | 53, 60 |
| Voltage mode (Terminal 53) | Switch S200=OFF(U) |
| Current mode (Terminal 53 and 60) | Switch S200=ON(I) |
| Voltage level | 0-10 V |
| Input resistance, R_i | approx. 10 kΩ |
| Max. voltage | 20 V |
| Current level | 0/4 to 20 mA (scaleable) |
| Input resistance, R_i | approx. 200 Ω |
| Max. current | 30 mA |

Analog output

| | |
|---------------------------------------|--------------------------------|
| Number of programmable analog outputs | 1 |
| Terminal number | 42 |
| Current range at analog output | 0/4-20 mA |
| Max. load to common at analog output | 500 Ω |
| Max. voltage at analog output | 17 V |
| Accuracy on analog output | Max. error: 0.8% of full scale |
| Scan interval | 4 ms |
| Resolution on analog output | 8 bit |
| Scan interval | 4 ms |

Control card, RS-485 serial communication

| | |
|------------------------------|----------------------------------|
| Terminal number | 68 (P,TX+, RX+), 69 (N,TX-, RX-) |
| Terminal number 61 | Common for terminals 68 and 69 |
| Control card, 24 V DC output | |
| Terminal number | 12 |
| Max. load (M1 and M2) | 100 mA |
| Max. load (M3) | 50 mA |
| Max. load (M4 and M5) | 80 mA |

Relay output

| | |
|--|---|
| Programmable relay output | 1 |
| Relay 01 Terminal number | 01-03 (break), 01-02 (make) |
| Max. terminal load (AC-1) ¹⁾ on 01-02 (NO) (Resistive load) | 250 V AC, 2 A |
| Max. terminal load (AC-15) ¹⁾ on 01-02 (NO) (Inductive load @ cosφ 0.4) | 250 V AC, 0.2 A |
| Max. terminal load (DC-1) ¹⁾ on 01-02 (NO) (Resistive load) | 30 V DC, 2 A |
| Max. terminal load (DC-13) ¹⁾ on 01-02 (NO) (Inductive load) | 24 V DC, 0.1 A |
| Max. terminal load (AC-1) ¹⁾ on 01-03 (NC) (Resistive load) | 250 V AC, 2 A |
| Max. terminal load (AC-15) ¹⁾ on 01-03 (NC) (Inductive load @ cosφ 0.4) | 250 V AC, 0.2 A |
| Max. terminal load (DC-1) ¹⁾ on 01-03 (NC) (Resistive load) | 30 V DC, 2 A |
| Min. terminal load on 01-03 (NC), 01-02 (NO) | 24 V DC 10 mA, 24 V AC 20 mA |
| Environment according to EN 60664-1 | overvoltage category III/pollution degree 2 |

1) IEC 60947 part 4 and 5

Control card, 10 V DC output:

| | |
|-----------------|---------------|
| Terminal number | 50 |
| Output voltage | 10.5 V ±0.5 V |
| Max. load | 25 mA |

NOTE

All inputs, outputs, circuits, DC supplies and relay contacts are galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.

Surroundings

| | |
|---|---|
| Enclosure | IP20 |
| Enclosure kit available | IP21, TYPE 1 |
| Vibration test | 1.0 g |
| Max. relative humidity | 5%-95 % (IEC 60721-3-3; Class 3K3 (non-condensing) during operation |
| Aggressive environment (IEC 60721-3-3), coated | class 3C3 |
| Test method according to IEC 60068-2-43 H2S (10 days) | |
| Ambient temperature | Max. 40 °C |

Derating for high ambient temperature, see

| | |
|---|------------------|
| Minimum ambient temperature during full-scale operation | 0 °C |
| Minimum ambient temperature at reduced performance | - 10 °C |
| Temperature during storage/transport | -25 to +65/70 °C |
| Maximum altitude above sea level without derating | 1000 m |
| Maximum altitude above sea level with derating | 3000 m |

Derating for high altitude, see 1.9 Special Conditions

| | |
|----------------------------|--|
| Safety standards | EN/IEC 61800-5-1, UL 508C |
| EMC standards, Emission | EN 61800-3, EN 61000-6-3/4, EN 55011, IEC 61800-3 |
| EMC standards, Immunity | EN 61800-3, EN 61000-6-1/2, EN 61000-4-2, EN 61000-4-3, EN 61000-4-4, EN 61000-4-5, EN 61000-4-6 |
| See 1.9 Special Conditions | |

1.9 Special Conditions

1.9.1 Derating for Ambient Temperature

The ambient temperature measured over 24 hours should be at least 5 °C lower than the max. ambient temperature.

If the frequency converter is operated at high ambient temperature, the continuous output current should be decreased.

The frequency converter has been designed for operation at max 50 °C ambient temperature with one motor size smaller than nominal. Continuous operation at full load at 50 °C ambient temperature will reduce the lifetime of the frequency converter.

1.9.2 Derating for Low Air Pressure

The cooling capability of air is decreased at low air pressure.

For altitudes above 2000 m, contact Danfoss regarding PELV.

Below 1000 m altitude no de-rating is necessary but above 1000 m the ambient temperature or the maximum output current should be decreased.

Decrease the output by 1% per 100 m altitude above 1000 m or reduce the max. ambient temperature by 1 degree per 200 m.

1.9.3 Derating for Running at Low Speeds

When a motor is connected to a frequency converter, it is necessary to check that the cooling of the motor is adequate.

A problem may occur at low speeds in constant torque applications. Running continuously at low speeds – below half the nominal motor speed – may require additional air cooling. Alternatively, choose a larger motor (one size up).

1.10 Options for VLT® Micro Drive

| Ordering No | Description |
|-------------|--|
| 132B0100 | VLT Control Panel LCP 11 w/o potentiometer |
| 132B0101 | VLT Control Panel LCP 12 with potentiometer |
| 132B0102 | Remote Mounting Kit for LCP incl. 3 m cable IP55 with LCP 11, IP21 with LCP 12 |
| 132B0103 | Nema Type 1 kit for M1 frame |
| 132B0104 | Type 1 kit for M2 frame |
| 132B0105 | Type 1 kit for M3 frame |
| 132B0106 | De-coupling plate kit for M1 and M2 frames |
| 132B0107 | De-coupling plate kit for M3 frame |
| 132B0108 | IP21 for M1 frame |
| 132B0109 | IP21 for M2 frame |
| 132B0110 | IP21 for M3 frame |
| 132B0111 | DIN rail mounting kit for M1 and M2 frames |
| 132B0120 | Type 1 kit for M4 frame |
| 132B0121 | Type 1 kit for M5 frame |
| 132B0122 | De-coupling plate kit for M4 and M5 frames |
| 132B0126 | M1 frame spare parts kits |
| 132B0127 | M2 frame spare parts kits |
| 132B0128 | M3 frame spare parts kits |
| 132B0129 | M4 frame spare parts kits |
| 132B0130 | M5 frame spare parts kits |

Table 1.17

Danfoss Line Filters and brake resistors are available upon request.

Index

A

| | |
|--------------------------|----|
| Active Set-up..... | 10 |
| Ambient Temperature..... | 18 |
| Analog Inputs..... | 17 |

B

Brake

| | |
|-------------------------------|----|
| Resistor (ohm)..... | 10 |
| Resistor Short-circuited..... | 13 |

C

| | |
|---------------------------------------|----|
| Cable Lengths And Cross Sections..... | 16 |
| Clearance..... | 3 |
| Control Card, 24 V DC Output..... | 17 |

D

| | |
|------------------------------------|----|
| DC-brake..... | 11 |
| DC-Brake..... | 10 |
| De-coupling Plate Kit..... | 19 |
| Derating | |
| For Ambient Temperature..... | 18 |
| For Low Air Pressure..... | 18 |
| For Running At Low Speeds..... | 18 |
| Digital | |
| Inputs..... | 16 |
| Inputs (pulse/encoder Inputs)..... | 16 |
| DIN Rail Mounting Kit..... | 19 |

E

| | |
|----------------------------|----|
| Earth Leakage Current..... | 2 |
| Edit Set-up..... | 10 |
| Electronic Waste..... | 3 |

G

| | |
|------------------|---|
| Ground Wire..... | 2 |
| Grounding..... | 2 |

H

| | |
|----------------|----|
| Hand Mode..... | 11 |
|----------------|----|

I

| | |
|----------------------------|----|
| IP21..... | 19 |
| Isolated Mains Source..... | 3 |
| IT Mains..... | 3 |

L

Load

| | |
|--------------------|----|
| Compensation..... | 10 |
| Sharing/Brake..... | 8 |

M
